Skills

Languages & Frameworks
PHP (Laravel), Node.js, JavaScript, TypeScript, React.js

Databases & Caching
MySQL, MongoDB, Redis

Cloud & DevOps
AWS, Docker, CI/CD

Core Strengths
System Design, API Architecture, RBAC, Workflow Systems, Performance Optimization

Knowledges

Multi-Tenancy
https://kaungsathein.online/engineering-notes/professional-experience--1-multi-tenancy

Profile

Backend-focused full stack developer specializing in **designing scalable, workflow-intensive business systems and high-performance backend architectures**.
Proven experience building and maintaining **HRMS, ATS, payroll, and internal platforms** supporting **100K+ users across multi-country environments**, with a strong focus on **data consistency, system reliability, and operational scalability**.

Skilled in **domain-driven design, RBAC systems, multi-level approval workflows, and complex business logic modeling**, enabling robust enterprise-grade applications. Strong background in **performance optimization (query design, indexing, caching), distributed system patterns, and API architecture**

Also embraces **"vibe coding"** — a pragmatic, flow-driven development approach that balances **deep engineering rigor with rapid iteration**, enabling faster prototyping, intuitive problem-solving, and creative solution design while maintaining production-quality standards.

Employment

Web Backend Developer (Trainee) — **Oct 2023 - Jan 2024**
Better HR, Yangon

Web Backend Developer — **Feb 2024 - Present**
Better HR, Yangon

Selected Production Work

Better HR (HRMS Platform)
Implementation
Designed and implemented scalable backend systems including:

- Expense management & multi-level approvals
- KPI tracking & performance evaluation
- Permission groups (RBAC)
- Indonesia payroll system

Additional enhancements across HR workflows and system performance

Key Contributions

- Designed **multi-level approval workflows** with role-based access control
- Optimized database queries and implemented **Redis caching** for high-load systems
- Built **Excel import/export pipelines** for large datasets
- Improved system reliability for **100K+ users across 8 countries**

Impact

- Reduced manual HR operations and improved workflow efficiency
- Improved system performance and scalability under high concurrency through query optimization and caching strategies

Application Tracking System (ATS)
Implementation
Built AI-powered CV upload and parsing pipeline with structured extraction (CV → JSON) and atomic candidate creation in ATS.

Key Contributions
- Designed **state-machine-based workflow transitions**
- Built **AI-powered CV → structured profile extraction**
- Implemented **atomic upload-to-candidate pipeline**
- Integrated ATS with internal HR systems

Impact
- Streamlined hiring workflow and reduced manual processing
- Improved data consistency and candidate tracking

Engineering Case Study — Problem → Solution → Trade-offs → Impact
https://kaungsathein.online/projects/application-tracking-system-ats

Job Content Management System (CMS)
Implementation
Developed a modular CMS system supporting job pages, companies, and search optimization.

Key Contributions
- Built **modular content sections & dynamic job pages**
- Designed **complex filtering & search logic**
- Integrated **Google Indexing API**
- Optimized CMS endpoints for performance

Impact
- Improved content management efficiency
- Enhanced search visibility and system scalability

Engineering Case Study — Problem → Solution → Trade-offs → Impact

Additional Systems
- **Middleware Service** — SMS/Email OTP system across Thailand & Vietnam
  https://kaungsathein.online/projects/middleware-service
- **Customer Management System** — Multi-country lifecycle + Xero, Monday, Notion integration
  https://kaungsathein.online/projects/customer-management-system-internal
- **HR AI Chatbot Agent** — Backend APIs for KPI, ATS, and performance data
  https://kaungsathein.online/projects/hr-ai-chatbot-agent

Feature Highlights

ATS CV Upload & AI Profile Extraction
Designed async CV upload pipeline with file intake, AI extraction, profile creation, notifications, ATS synchronization; modeled structured applicant datasets.

Expense Tracking System
Designed complete module scope including use cases, architecture, workflow, ERD, implementation plan, high-risk testing; modeled multi-level approval, paid-out handling, reclassification.

System Design Deep Dive — Architecture & Implementation
https://kaungsathein.online/projects/expense-tracking-system

KPI Module
Designed full KPI module covering group management, target assignment, user tracking, exports, mobile visibility; structured setup, assignment, tracking, reporting.

System Design Deep Dive — Architecture & Implementation
https://kaungsathein.online/projects/kpi-module

Permission Group
Designed group-based access control using department, position, location, status scope; separated permission definition, group mapping, runtime visibility evaluation.

System Design Deep Dive — Architecture & Implementation
https://kaungsathein.online/projects/permission-group

Indonesia Payroll
Built payroll logic around annualized taxable income, personal/family relief, allowed deductions, progressive tax brackets, prior-tax reconciliation.
