Skills

Languages & Frameworks

PHP (Laravel), Node.js, JavaScript, TypeScript, React.js

Databases & Caching

MySQL, MongoDB, Redis

Cloud & DevOps

AWS, Azure, Docker, CI/CD

Core Strengths

System Design, API Architecture, RBAC, Workflow Systems, Performance Optimization, AI Integrated Features

Knowledges

Multi-Tenancy

kaungsathein.online/engineering-notes/professional-experience--1-multi-tenancy

Agentic Coding (AI-Assisted Development Approach)

kaungsathein.online/engineering-notes/professional-experience--2-agentic-coding-ai-assisted-development-approach

Profile

I'm a backend-focused senior full-stack engineer who likes building web apps, production APIs, AI-powered features, and n8n automations that solve real business problems.

Most of my work has been around HRMS, ATS, payroll, permissions, and internal platforms used by **100K+ users across multiple countries**. I enjoy taking messy workflows and turning them into systems that are easier to trust: **clear domain models, RBAC boundaries, faster queries, caching, integrations, and event-driven flows.**

I also enjoy building practical n8n automations for sales bots, daily reminders, and sales analysis. Even this portfolio is powered by automation, **with a daily cron job that syncs my Notion notes into a living engineering knowledge base.** Beyond that automation, I also build and ship new features, design updates, and improvements to the portfolio **directly from my phone.**

Employment

Web Backend Developer (Trainee) — **Oct 2023 - Jan 2024**
Better HR, Yangon

Web Backend Developer — **Feb 2024 - Jun 2026**
Better HR, Yangon

Senior Web Backend Developer — **Jul 2026 - Present**
Better HR, Yangon

Selected Production Work

Better HR (HRMS Platform)

Implementation

Designed and implemented scalable backend systems including:

- Expense management & multi-level approvals
- KPI tracking & performance evaluation
- Permission groups (RBAC)
- ATS, AI CV extraction & JD-driven talent search
- Indonesia payroll, Workforce analytics & Excel import/export

Key Contributions

- Designed multi-level approval workflows with role-based access control
- Built an AI-powered HRIS agent integrated with existing GraphQL operations
- Integrated AI CV extraction and JD-driven talent search into HR workflows
- Optimized database queries, Redis caching, and high-traffic endpoints
- Implemented complex payroll, approval, and performance business rules

Impact

- Supported 100K+ users across 8 countries
- Reduced manual HR operations through automation AI-assisted workflows
- Improved system performance through query optimization and caching
- Expanded the platform with production-ready AI-powered HR capabilities

Application Tracking System (ATS)

Implementation

Designed and implemented an end-to-end Applicant Tracking System (ATS) integrated with HRMS and AI-powered CV processing, including:

- Recruitment workflow from Screening → Offer
- AI CV/PDF extraction into structured candidate data
- ATS-to-HRMS candidate integration
- Automated candidate creation and processing

Key Contributions

- Built AI-powered CV extraction with structured JSON output
- Designed explicit and auditable recruitment stage transitions
- Implemented atomic CV parsing → candidate creation to prevent partial or inconsistent records
- Integrated ATS candidate data with downstream HRMS workflows

Impact

- Reduced manual CV processing and duplicate recruiter data entry
- Improved candidate data consistency across ATS and HRMS
- Increased reliability across AI parsing, candidate creation, and recruitment workflows
- Delivered a more streamlined screening-to-offer hiring process

Job Content Management System (CMS)

Implementation

Developed a modular CMS system supporting job pages, companies, and search optimization.

Key Contributions

- Built modular content sections & dynamic job pages
- Designed complex filtering & search logic
- Integrated Google Indexing API and Push Notifications for Related Jobs

Impact

- Improved content management efficiency
- Enhanced search visibility and system scalability

Additional Systems

- **Middleware Service** — SMS/Email OTP system across Thailand & Vietnam
https://kaungsathein.online/projects/middleware-service
- **Customer Management System** — Multi-country lifecycle + Xero, Monday, Notion integration
https://kaungsathein.online/projects/customer-management-system-internal
- **HR AI Chatbot Agent** — Production HR agent using runtime GraphQL discovery and guarded execution across 79 HR operations
https://kaungsathein.online/projects/hr-ai-chatbot-agent
- **CRM Dashboard** — Internal release notes & feature request portal in-product tenant delivery
https://kaungsathein.online/projects/crm-publishing-portal

Feature Highlights

ATS CV Upload & AI Profile Extraction

Built an AI-powered CV processing pipeline that converts uploaded CVs into structured JSON, atomically creates candidate profiles, and integrates them into the ATS-to-HRMS recruitment workflow.

System Design Deep Dive — Architecture & Implementation
https://kaungsathein.online/projects/ats-cv-upload-ai-profile-extraction

Extract CV to Employee (AI)

Brought AI CV extraction into the HRMS employee record: upload a CV and have experience, industry, function, education, certificates, and languages parsed into structured talent fields instead of typed in by hand.

System Design Deep Dive — Architecture & Implementation
https://kaungsathein.online/projects/extract-cv-to-employee-ai

Expense Tracking System

Designed complete module scope including use cases, architecture, workflow, ERD, implementation plan, high-risk testing; modeled multi-level approval, paid-out handling, reclassification.

System Design Deep Dive — Architecture & Implementation
https://kaungsathein.online/projects/expense-tracking-system

KPI Module

Designed full KPI module covering group management, target assignment, user tracking, exports, mobile visibility; structured setup, assignment, tracking, reporting.

System Design Deep Dive — Architecture & Implementation
https://kaungsathein.online/projects/kpi-module

Permission Group

Designed group-based access control using department, position, location, status scope; separated permission definition, group mapping, runtime visibility evaluation.

System Design Deep Dive — Architecture & Implementation
https://kaungsathein.online/projects/permission-group

Indonesia Payroll

Built payroll logic around annualized taxable income, personal/family relief, allowed deductions, progressive tax brackets, prior-tax reconciliation.
